Hi Eric,

For the May 2017 event at HTC, a total of 25 test pits were excavated and 196 samples collected. On the 5/16/17 list below, only 5 pits were excavated, not 11.

Subject: HTC Soil Data Summary

Good Afternoon:

I am having a hard time finding the HTC Site Soil Data Compilation Excel File. The comparable NFB file is attached. This would have the 2013 Pre-Remedial Tabs (SAT) as well as all of our soil data results. I know we have to update the PRG (SSAL) values for HTC but I recall we had preliminary values. For the more recent data values, we will have comparable HpGe results that Chad obtained that will also need to be put side by side with the lab data.

Please let me know.

Thanks

Regards,
